

Who Wrote The Bible By Richard Elliott Friedman

Unveiling the Authors of Scripture: A Deep Dive into Who Wrote the Bible by Richard Elliott Friedman

The question of biblical authorship has intrigued scholars, theologians, and lay readers for centuries. For many, the Bible is not merely a religious text but a historical document, a literary masterpiece, and a cultural cornerstone. Among the most compelling explorations of this topic is the seminal work by Richard Elliott Friedman, titled **Who Wrote the Bible**. First published in 1987, this book revolutionized public understanding of biblical scholarship. In this article, we will explore the core arguments of Friedman's work, the Documentary Hypothesis he champions, and why this book remains a vital resource for anyone seeking to understand the origins of the Hebrew Bible.

Who Is Richard Elliott Friedman?

Before delving into the book itself, it is essential to understand the author. Richard Elliott Friedman is a distinguished biblical scholar and professor of Jewish studies. He has taught at the University of California, San Diego, and the University of Georgia, and he is widely regarded for his expertise in the Hebrew Bible and the history of ancient Israel. Friedman's academic rigor is matched by his ability to write for a general audience, making complex theories accessible without sacrificing depth. **Who Wrote the Bible** is perhaps his most famous work, praised for its clarity, evidence-based arguments, and engaging narrative style.

Friedman's Academic Credentials and Approach

Friedman earned his doctorate in Hebrew Bible and Near Eastern languages from Harvard University. His approach combines literary analysis, historical criticism, and archaeological evidence. He is a leading proponent of the Documentary Hypothesis, a theory that posits the Torah (the first five books of the Bible) was compiled from multiple distinct sources. Friedman's work stands out because he does not merely present the theory; he attempts to identify the specific individuals or circles responsible for each source, weaving a compelling historical narrative.

Understanding the Documentary Hypothesis

The Documentary Hypothesis is the backbone of **Who Wrote the Bible by Richard Elliott Friedman**. To appreciate Friedman's arguments, one must first grasp the basics of this hypothesis. The theory suggests that the Pentateuch—Genesis, Exodus, Leviticus, Numbers, and Deuteronomy—was not written by a single author (traditionally Moses) but was instead woven together from four principal documents.

The Four Sources: J, E, D, and P

Friedman, building on the work of earlier scholars like Julius Wellhausen, identifies four distinct sources, each with its own literary style, theological perspective, and historical context:

- **J (Yahwist):** This source uses the divine name Yahweh (often translated as the Lord) and is characterized by vivid, anthropomorphic descriptions of God. It is believed to have been written in the southern kingdom of Judah around the 10th to 9th centuries BCE.
- **E (Elohist):** This source uses the term Elohim for God and emphasizes prophetic themes and a more transcendent view of the divine. It is associated with the northern kingdom of Israel and dates to the 9th to 8th centuries BCE.
- **D (Deuteronomist):** This source is primarily found in the book of Deuteronomy and is tied to the religious reforms of King Josiah in the late 7th century BCE. It stresses centralization of worship and covenant loyalty.
- **P (Priestly):** This source focuses on priestly concerns such as ritual, genealogy, and the tabernacle. It is often dated to the period of the Babylonian exile (6th century BCE) and emphasizes order and divine sovereignty.

Friedman's innovation lies not in identifying these sources—scholars had done that long before him—but in proposing who the actual authors might have been and how their documents were combined into a single, coherent narrative.

Who Wrote the Bible According to Friedman?

The central thesis of **Who Wrote the Bible by Richard Elliott Friedman** is that we can go beyond identifying sources and actually name the authors or circles behind them. Friedman argues that the historical circumstances of ancient Israel provide the key clues.

The Yahwist (J): A Woman in the Court of Solomon

One of Friedman's most startling proposals is that the Yahwist source (J) may have been written by a woman. He points to the detailed accounts of domestic life, the prominent roles of women in J's narratives (such as Eve, Sarah, and Hagar), and a general sensitivity to female perspectives. He suggests that J

might have been a member of the royal court in Jerusalem during the reign of King Solomon, possibly a woman of high status with access to courtly traditions and archives.

The Elohist (E): A Northern Priest

For the Elohist source (E), Friedman posits a priestly figure from the northern kingdom of Israel. This source reflects the concerns of the northern tribes, particularly the emphasis on prophecy and the role of figures like Moses and Joshua. E is often seen as a counterpoint to J, offering a different theological vision that emphasizes divine distance and revelation through dreams and prophets.

The Deuteronomist (D): The Prophet Jeremiah and His Scribe

Perhaps the most compelling identification Friedman makes is for the Deuteronomist (D). He argues that the book of Deuteronomy and the subsequent history of Israel (the books of Joshua, Judges, Samuel, and Kings) were written by the prophet Jeremiah or his scribe Baruch. Friedman notes the striking similarities between the language of Deuteronomy and the book of Jeremiah, as well as the shared theological concerns about covenant faithfulness and the consequences of idolatry. He further ties this to the religious reforms of King Josiah, which centered on the discovery of a "book of the law" in the Temple—a book that Friedman believes was Deuteronomy itself.

The Priestly Source (P): A Circle of Priests in Exile

The final source, P, is attributed to a circle of Aaronid priests during the Babylonian exile. Friedman argues that these priests, cut off from the Temple and the sacrificial system, turned to writing as a way to preserve their traditions and identity. The Priestly source is concerned with order, holiness, and the promise of restoration. It provides the overarching structure of the Torah, including the creation account in Genesis 1 and the detailed laws of Leviticus.

The Redactor Who Wove It All Together

Friedman does not stop at identifying the authors of the four sources. He also asks the crucial question: Who combined these documents into the single, continuous narrative we know as the Torah? This figure is often called the redactor.

Ezra the Scribe as the Final Redactor

Friedman makes a strong case that the final redactor was Ezra the Scribe, who is described in the book of Nehemiah as bringing the Torah to the people of Jerusalem in the 5th century BCE. Ezra was a priest and scribe trained in both Jewish and Persian traditions, making him uniquely qualified to synthesize the diverse sources into a unified whole. Friedman argues that Ezra's role was not

to create new content but to skillfully edit and arrange existing material, preserving the distinct voices of J, E, D, and P while creating a single, coherent book.

The Significance of Who Wrote the Bible by Richard Elliott Friedman

The impact of **Who Wrote the Bible** extends far beyond academic circles. Friedman's work has several important implications for how we understand the Bible today.

Democratizing Biblical Scholarship

Before Friedman, the Documentary Hypothesis was largely confined to university lecture halls and theological seminaries. By presenting the evidence in a clear, accessible manner, Friedman made these ideas available to anyone interested in the Bible's origins. He showed that biblical criticism is not a threat to faith but a tool for deeper understanding.

Affirming the Human Element of Scripture

One of the most profound takeaways from **Who Wrote the Bible by Richard Elliott Friedman** is the affirmation that the Bible was written by real people in specific historical circumstances. These authors were not dispassionate scribes but passionate individuals with their own theological agendas, political loyalties, and personal experiences. Recognizing this human element does not diminish the Bible's spiritual significance; rather, it enriches our appreciation of its complexity and depth.

Bridging Faith and Scholarship

Friedman himself has noted that his work is compatible with a range of religious perspectives. While some traditionalists may resist the idea of multiple authors, many religious readers have found that Friedman's insights deepen their engagement with the text. Understanding the distinct voices of J, E, D, and P can illuminate layers of meaning that a single-author reading might miss.

Criticisms and Ongoing Debates

No influential work is without its critics, and **Who Wrote the Bible** has generated its share of scholarly debate.

Challenges to the Documentary Hypothesis

Some scholars have questioned the Documentary Hypothesis itself, arguing that the sources are not as distinct as Friedman and Wellhausen claimed. Alternative theories, such as the Supplementary Hypothesis (which posits that a base text was expanded over time) or the Fragmentary Hypothesis (which sees

the Torah as a collection of smaller units), have gained traction in recent decades.

Speculative Identifications

Friedman's specific identifications—especially the claim that J was a woman and that D was Jeremiah—are more speculative than the general source division. Many scholars accept the four-source theory but are cautious about attributing names or specific identities to the authors. Nevertheless, even critics acknowledge that Friedman's proposals are well-argued and grounded in the available evidence.
